

## Aldrich Raman

*Library Listing – 14,033 spectra*

This library represents the most comprehensive collection of FT-Raman spectral references available. It contains many common chemicals found in the *Aldrich Handbook of Fine Chemicals*.

To create the Aldrich Raman Condensed Phase Library, 14,033 compounds found in the Aldrich Collection of FT-IR Spectra Edition II Library were excited with an Nd:YVO<sub>4</sub> laser (1064 nm) using laser powers between 400 - 600 mW, measured at the sample. A Thermo FT-Raman spectrometer (with a Ge detector) was used to collect the Raman spectra. The spectra were saved in Raman Shift format.
